

FROM BETTER REGULATION TO SMART REGULATION

Regulatory impact assesement and its
introduction in Spain

by Giulia Carceller Stella

Awareness has slowly grown of the need for an improvement in regulatory activity, the simple existence of the norm is not a guarantee to achieve its goals and sometimes causes undesired effects. Making regulation requires a prior and subsequent analysis of its need, its impact and to determine its effectiveness.

It seeks a rethinking and analysis of the processes of normative creation to adapt to a new scenario and a new complex and changing reality, from which they arise and on which they intend to project themselves.

Today we have greater and better resources, knowledge and means to base the quality of the norms in the knowledge of social context, evaluating the achievement of its results and orienting them better towards the social benefit.

Degree in Political Science and Public Administration from Cardinal Herrera University CEU (2006). Graduated in Law from the Jaume I University of Castellón (2014). Professional title of lawyer of the Ministry of Justice, Government of Spain (2016). Doctoral thesis project registered in the doctorate program in law at the Jaume I University of Castellón. Currently doing internships in the Regional Department of Justice of the Generalitat Valenciana and practicing professionally as a lawyer.
